Hero slider

<https://getbootstrap.com/docs/4.6/components/carousel/>

Site Identity- Where you can change the name of the site, add a site logo and add a site icon.

Colors- Where you can change the background color of your site.

Background Image- Where you can add a background image instead of a color

Menus- where you can make changes to your navbar menu or footer menu areas.

Widgets- Little pieces of content that will show up in multiple places rather than in one place. This includes different items you can add to your site such as a calendar, search bar, custom html, etc.

Homepage Settings- A shortcut to set your site's homepage (can be a blog layout or custom template)

Theme Layout Settings- Where you can set what type of container you want your page to have and change the sidebars.

Additional CSS – Where you can add css that would usually go in your style.css.

Menus- where you can make changes to your navbar menu or footer menu areas.

Widgets- Little pieces of content that will show up in multiple places rather than in one place. This includes different items you can add to your site such as a calendar, search bar, custom html, etc.

Blank Page Template- completely blank page with no header, footer, container, or widget areas.
